

An organ where T cells mature	First step in T cell maturation	Transcription factor that turns on tissue antigens in the thymus	A cytokine released by macrophages during inflammation	How autoreactive T cells are eliminated
A great phagocyte that is long lived	Protein that can be recognized by lymphocytes	Conserved parts of microbes recognized by PRRs	Expressed only on APCs and present peptides	Small part of the antigen recognized by lymphocytes
Expressed on all nucleated cells and present peptides	Antigen presenting cell that talks to T cells	FREE	An organ where you find HSCs	Co-receptor for T cells
Early immune response to pathogen that is not specific	Innate immune cells that secrete histamines	A phagocyte that secretes intracellular DNA to trap pathogens	Delayed immune response to pathogen that is highly specific	PRRs that recognize parts of microbes
Receptor on macrophages that help phagocytose microbes	Part of the TCR complex	Molecule that recognizes MHC:peptide complex	Where T and B cells see antigen	A complement protein that binds to microbial surfaces
A cytokine released by macrophages during inflammation	Receptor on macrophages that help phagocytose microbes	How autoreactive T cells are eliminated	An organ where T cells mature	Antigen presenting cell that talks to T cells
Early immune response to pathogen that is not specific	Where T and B cells see antigen	Protein that can be recognized by lymphocytes	Innate immune cells that secrete histamines	A complement protein that binds to microbial surfaces
Part of the TCR complex	Molecule that recognizes MHC:peptide complex	FREE	Transcription factor that turns on tissue antigens in the thymus	Small part of the antigen recognized by lymphocytes
First step in T cell maturation	An organ where you find HSCs	Delayed immune response to pathogen that is highly specific	Co-receptor for T cells	A great phagocyte that is long lived
PRRs that recognize parts of microbes	Conserved parts of microbes recognized by PRRs	Expressed on all nucleated cells and present peptides	Expressed only on APCs and present peptides	A phagocyte that secretes intracellular DNA to trap pathogens

A complement protein that binds to microbial surfaces	Expressed only on APCs and present peptides	Expressed on all nucleated cells and present peptides	Transcription factor that turns on tissue antigens in the thymus	Part of the TCR complex
A phagocyte that secretes intracellular DNA to trap pathogens	Antigen presenting cell that talks to T cells	Where T and B cells see antigen	Early immune response to pathogen that is not specific	First step in T cell maturation
Co-receptor for T cells	Receptor on macrophages that help phagocytose microbes	FREE	Innate immune cells that secrete histamines	A great phagocyte that is long lived
Molecule that recognizes MHC:peptide complex	Delayed immune response to pathogen that is highly specific	An organ where T cells mature	Small part of the antigen recognized by lymphocytes	Conserved parts of microbes recognized by PRRs
How autoreactive T cells are eliminated	PRRs that recognize parts of microbes	Protein that can be recognized by lymphocytes	A cytokine released by macrophages during inflammation	An organ where you find HSCs
Small part of the antigen recognized by lymphocytes	Expressed only on APCs and present peptides	Protein that can be recognized by lymphocytes	An organ where you find HSCs	PRRs that recognize parts of microbes
A cytokine released by macrophages during inflammation	A complement protein that binds to microbial surfaces	Expressed on all nucleated cells and present peptides	Where T and B cells see antigen	How autoreactive T cells are eliminated
Innate immune cells that secrete histamines	A phagocyte that secretes intracellular DNA to trap pathogens	FREE	First step in T cell maturation	Co-receptor for T cells
Delayed immune response to pathogen that is highly specific	A great phagocyte that is long lived	Early immune response to pathogen that is not specific	Molecule that recognizes MHC:peptide complex	Receptor on macrophages that help phagocytose microbes
Conserved parts of microbes recognized by PRRs	Antigen presenting cell that talks to T cells	Part of the TCR complex	An organ where T cells mature	Transcription factor that turns on tissue antigens in the thymus

A complement protein that binds to microbial surfaces	An organ where T cells mature	Small part of the antigen recognized by lymphocytes	Antigen presenting cell that talks to T cells	Molecule that recognizes MHC:peptide complex
Where T and B cells see antigen	Expressed only on APCs and present peptides	Innate immune cells that secrete histamines	First step in T cell maturation	Transcription factor that turns on tissue antigens in the thymus
Conserved parts of microbes recognized by PRRs	A great phagocyte that is long lived	FREE	An organ where you find HSCs	Part of the TCR complex
Delayed immune response to pathogen that is highly specific	PRRs that recognize parts of microbes	A cytokine released by macrophages during inflammation	Early immune response to pathogen that is not specific	Protein that can be recognized by lymphocytes
A phagocyte that secretes intracellular DNA to trap pathogens	Expressed on all nucleated cells and present peptides	Receptor on macrophages that help phagocytose microbes	How autoreactive T cells are eliminated	Co-receptor for T cells
Expressed on all nucleated cells and present peptides	Where T and B cells see antigen	PRRs that recognize parts of microbes	A complement protein that binds to microbial surfaces	Conserved parts of microbes recognized by PRRs
Protein that can be recognized by lymphocytes	Innate immune cells that secrete histamines	Delayed immune response to pathogen that is highly specific	An organ where T cells mature	Part of the TCR complex
Early immune response to pathogen that is not specific	A great phagocyte that is long lived	FREE	A cytokine released by macrophages during inflammation	Antigen presenting cell that talks to T cells
How autoreactive T cells are eliminated	Molecule that recognizes MHC:peptide complex	Expressed only on APCs and present peptides	Receptor on macrophages that help phagocytose microbes	A phagocyte that secretes intracellular DNA to trap pathogens
